1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-22 are drawn to nucleic acids and vectors and host cells containing said nucleic acids classified in Class 536, subclass 23.5 and Class 435, subclasses 320.1, 252.3 and 325.
- II. Claims 23-48 are drawn to a method of monitoring Ig class switch recombination, classified in Class 435, subclass 5.

2. The inventions are distinct, each from the other because of the following reasons.

3. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process such as for the production of probes for hybridization assays to detect cells expressing the claimed nucleic acids.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and Groups I and II have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition
